US-08-477-727A-83

Sequence 83, Application US/08477727A

Patent No. 5739106

GENERAL INFORMATION:
APPLICANT: Rink, Timothy
APPLICANT: Rink, Timothy
APPLICANT: Peeley, Nigel
APPLICANT: Pricket, Kathryn
TITLE OF INVENTION: APPETITE REGULATING
TITLE OF INVENTION: COMPOSITIONS
NUMBER OF SEQUENCES: 108
CORRESPONDENCE ADDRESS:
ADDRESSEE: LYON & LYON
STREET: 633 WEST FIFTH STREET, SUITE 4700
CITY: LOS ANGELES

```
Treatment of a patient with anorexia or related condition comprises admin. of amylin or an analogue in an amt. sufficient to increase the amylin level in the plasma of the patient. The pref. amylin analogues are given in AAR29197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt. and ratio sufficient to increase adipose tissue. Typical dosage units contain 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of amylin and opt. insulin for treating anorexia - increases plasma amylin and/or insulin levels, also for treating cachexia conditions,
                                                                                                                                                                                                                                                                                                                  Use of amylin and opt. insulin for treating anorexia - increases plasma amylin and/or insulin levels, also for treating cachexia conditions,

be used as hyperglycaemics. The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779 and AAR38809-R38826.                                                                                                                                                                                                                                                                                           ö
                                             Treatment of a patient with anorexia or related condition comprises admin. of amylin or an analogue in an amt. sufficient to increase the amylin level in the plasma of the patient. The pref. amylin analogues are given in AAR29197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt, and ratio sufficient to increase adipose tissue. Typical dosage units contain 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-MAR-2003 to correct PN field.)

The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779 -R37795 and AAR38809-R38826. ```
This sequence represents a human amylin analogue, that acts as a amylin agonist. The invention relates to a liquid pharmaceutical formulation (A), that contains (Wt. Vol.): 0.01-0.5% amylin agonist (I); 1-10% carbohydrate or polyol (II); and 0.02-0.5% acetate, phosphate, citrate or glutamate buffer (III); and has pH 3-6. (A) are used, in conjunction with increases in glucose levels of the blood. In these formulations, (I) is stabilised, especially against deamidation and peptide bond hydrolysis for up to 4 years at 5 degrees C amd 30 days at 30 degrees C, without addition of a separate stabiliser. They also retain short-term (up to 24 administered together, reducing the number of information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
Stabilized liquid formulation for treatment of insulin-dependent diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

This invention relates to a method for treating or preventing gastritis or gastric ulceration which comprises administering amylin or an amylin agonist. Amylin administration is not carried out intra-cerebroventricularly. The specification describes a method for treating or preventing a condition for which a non-steroidal anti-inflammatory agent (NSAID) is indicated, comprising administering amylin or amylin agonist, which is not calcitonin, together with NSAID and also a composition comprising an amylin or an amylin agonist or their salts, except calcitonin and a NSAID in a carrier. The amylin composition is by nasal, oral, pulmonary, transdermal and buccal routes. The method is also used to treat humans by administering it subcutaneously, intravenously or by nasal, orticat pain, fever, inflammation, arthritis, hypercoagulation sequence is an example of an agonist used in the method
                                                                                                                                   non-steroidal anti-inflammatory agent; NSAID; intravenous; subcutaneous; pain; fever; inflammation; arthritis; hypercoagulation.
                                                                           Human amylin agonist peptide des-1-Lys23-Leu25-Pro26-Val28-Pro-amylin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a human amylin analogue, that acts as a amylin agonist. The invention relates to a liquid pharmaceutical formulation (A), that contains (Wt./vol.): 0.01-0.5% amylin agonist (I); 1-10% carbohydrate or polyol (III); and 0.02-0.5% acetate, phosphate, citrate or glutamate buffer (III); and has pH 3-6. (A) are used, in conjunction with insulin, for treatment to of diabetes, specifically to reduce post-prandial increases in glucose levels of the blood. In these formulations, (I) is stabilised, especially against deamidation and peptide bond hydrolysis for up to 4 years at 5 degrees C and 30 days at 30 degrees C, without addition of a separate stabiliser. They also retain short-term (up to 24 min stability when combined with insulin, allowing both agents to be administered together, reducing the number of injections required. Note: This sequence was created by the indexer from information given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Stabilized liquid formulation for treatment of insulin-dependent diabetes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a method for treating or preventing gastritis or gastric ulceration which comprises administering amylin or an amylin agonist. Amylin administration is not carried out intra-cerebroventricularly. The specification describes a method for treating or preventing a condition for which a non-steroidal anti-inflammatory agent (NSAID) is indicated, comprising administering amylin or amylin composition comprising an amylin or an amylin agonist, which is not calcitonin, together with NSAID and also a composition comprising an amylin or an amylin agonist or their salts, except calcitonin and a NSAID in a carrier. The amylin composition is used to treat humans by administering it subcutaneously, intravenously or by nasal, oral, pulmonary, transdermal and buccal routes. The method is also used to treat pain, fever, inflammation, arthritis, hypercoagulation and other condition where an NSAID would be indicated. The present sequence is an example of an agonist used in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amylin agonist; amylin; gastric motility; gastric emptying; postprandial dumping syndrome; postprandial hyperglycenta; gastrointestinal diagnostic procedure; gastrointestinal disorder; spasm; acute diverticulitis; biliary tract disorder; sphincter of oddi disorder.
                                                                                                                                                                                                                                                          Method for treating or preventing gastritis - comprises administering amylin or amylin agonist, except calcitonin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

The present sequence represents an amylin agonist analogue compound. Amylin or amylin agonists are administered for reducing gastric motility or delaying gastric emptying, and for treating postprandial dumping syndrome or postprandial hypersylvemia, by inducing amylin activity, in a mammal. The peptides are used to reduce gastric motility or for delaying pastric emptying in a mammal undergoing gastrointestinal diagnostic procedures, such as radiological examination or magnetic resonance imaging. They are also used for reducing gastric motility in agastrointestinal disorder, especially spass, which is associated with a disorder of acute diverticulitie or disorders of biliary tract or sphincter of oddi. They are also used to treat postprandial dumping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amylin agonist; amylin; gastric motility; gastric emptying; postprandial dumping syndrome; postprandial hyperglycemia; gastrointestinal diagnostic procedure; gastrointestinal disorder; spasm; acute diverticulitis; biliary tract disorder; sphincter of oddi disorder.
                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                 Treating gastrointestinal disorder e.g. spasm by reducing gastric motility or delaying gastric emptying, postprandial dumping syndrome or postprandial hyperglycemia, by administering amylin or amylin agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                     The present sequence represents an amylin agonist analogue compound. Amylin or amylin agonists are administered for reducing gastric motility or delaying gastric emptying, and for treating postprandial dumping syndrome or postprandial hyperglycemia, by inducing amylin activity, in a mammal. The peptides are used to reduce gastric motility or for delaying gastric emptying in a mammal undergoing gastrointestinal diagnostic procedures, such as radiological examination or magnetic resonance imaging. They are also used for reducing gastric motility in gastrointestinal disorder, especially spasm, which is associated with a disorder of acute diverticulities or disorders of biliary tract or sphincter of oddi. They are also used to treat postprandial dumping syndrome or postprandial hyperglycemia
                                                                                                                                                                                                                                                                                                                                                                          in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New pharmaceutical formulation useful for treating patients with type II
                                                                                                                                                                                                          or
                                                                                                                                                                                Treating gastrointestinal disorder e.g. spasm by reducing gastric
motility or delaying gastric emptying, postprandial dumping syndrome or
postprandial hyperglycemia, by administering amylin or amylin agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; amylin agonist; amylin peptide analogue; acetate; carbohydrate;

comprising (wt/vol*) an amylin agoinst (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or alcohol (1 - 10) and an acetate, phosphate, citrate or glutamate buffer (0.02 - 0.5) having a ph of 3 - 6. Also described is a commercial package containing the liquid pharmaceutical formulation (A). The package comprises a borosilicate glass vial having an open end, a stopper for multiuse comparible with the amylin and/or amylin agoinst tixed in the open end of the vial. The package also comprises a cartridge for use in a pen injector. (A) has antidiabetic activity and can be used in the treatment of patients with type II diabetes. The formulation comprises amylin agoinst which is biologically active, has a reduced tendency to form aggregates in water or at a pressure of greater than 2 psi and has a reduced tendency to precipitate in the presence of NaCl compared to human amylin. The formulation maintains stability upon storage under refrigerated or room-température conditions. The formulation retains short-term mixing compatibility with insulin and results in improved stability of the hormone and the patients no longer need to refrigerate the vial of insulin in use. The present sequence represents a human amylin peptide analogue, which can be used as an amylin agonist in the present invention. N.B. The present sequence is not given in the present specification but is derived from the 37 amino acid human amylin as stated in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
diabetes comprises amylin agonist, carbòhydrate or polyhydric alcohol and
a buffer.
                                                                                                                                                                                           The present invention describes a liquid pharmaceutical formulation (A)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, amylin agonist, amylin peptide analogue, acetate, carbohydrate, liquid pharmaceutical formulation, polyhydric alcohol; phosphate, citrate, glutamate, buffer; antidiabetic, type II diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                              comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a collumnate buffer (0.02 - 0.5) having a ph of 3 - 6. Also described is a commercial package containing the liquid pharmaceutical formulation (A). The package comprisible with the amylin and/or amylin agonist cropper for multiuse compatible with the amylin and/or amylin agonist cropper in the far end of the vial and an aluminium band to retain the cropper in the far end of the vial. The package also comprises a carridge for use in a pen injector. (A) has antidiabetes. The crompatein comprises amylin agonist which is biologically active, has a carridge for use in a pen injector. (A) has antidiabetes of greater comparises amylin agonist which is biologically active, has a reduced tendency to precipitate in the presence of formulation comprises amylin agonist which is biologically active, has a reduced tendency to precipitate in the presence of than 2 psi and has a reduced tendency to precipitate in the presence of storage under refrigerated or room-temperature conditions. The compared to human amylin, the formulation maintains stability upon storage under refrigerate the vial of insulin in use. The present sequence is not crepresents a human amylin persent invention.

C human amylin as stated in the invention

                                                                                                                                                                                                     The present invention is directed to novel methods for reducing gastric motility and delaying gastric emptying, comprising the administration of an amylin or an amylin agonist. The invention is useful for reducing gastric motility and delaying gastric emptying for therapeutic and diagnostic purposes. The invention is also useful for treating conditions associated with elevated, inappropriate or undesired post-prandial blood glucose levels and treating ingestion of a toxin. The present sequence is human amylin agonist analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Reducing gastric motility or delaying gastric emptying in a mammal, useful for treating post-prandial hyperglycemia, comprises administering an amylin or an amylin agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention is directed to novel methods for reducing gastric motility and delaying gastric emptying, comprising the administration of an amylin or an amylin agonist.                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention is directed to novel methods for reducing gastric motility and delaying gastric emptying which comprises the administration of an amylin or an amylin agonist. The invention is useful for treating postprandial dumping syndrome, postprandial hyperglycemia and reducing gastric motility associated with gastrointestinal disorders such as spasm or delaying gastric emptying in a mammal undergoing a gastrointestinal disorders such as radiological examination and magnetic resonance imaging. The invention is also useful for lowering postprandial blood glucose levels during treatment of diabetes. The present sequence is human amylin agonist peptide analogue. This sequence is used in the
gastric motility and delaying gastric emptying for therapeutic and diagnostic purposes. The invention is also useful for treating conditions associated with elevated, inappropriate or undesired post-prandial blood glucose levels and treating ingestion of a toxin. The present sequence is human amylin agonist analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of amylin agonist for reducing gastric motility, delaying gastric emptying and for treating postprandial dumping syndrome and postprandial hyperglycemia.
                                                                                                                   Gaps

The invention is useful for treating postprandial dumping syndrome, postprandial hyperglycemia and reducing gastric motility associated with gastrointestinal disorders such as spasm or delaying gastric emptying in a mammal undergoing a gastrointestinal dispostic procedure such as radiological examination and magnetic resonance imaging. The invention is also useful for lowering postprandial blood glucose levels during treatment of diabetes. The present sequence is human amylin agonist peptide analogue. This sequence is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of amylin agonist for reducing gastric motility, delaying gastric emptying and for treating postprandial dumping syndrome and postprandial hyperglycemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises a pharmaceutical composition for transmucosal administration of a bioactive peptide/protein (e.g. exendin, PYY, GLP-1 or amylin peptide/protein) of interest. The composition of the invention is useful for the transmucosal administration of a bioactive peptide or protein and is useful for treating or preventing viral or bacterial diseases in humans. The present amino acid sequence represents an amylin peptide that is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises a pharmaceutical composition for transmucosal administration of a bioactive peptide/protein (e.g. exendin, PYY, GLP-1 or amylin peptide/protein) of interest. The composition of the invention is useful for the transmucosal administration of a bioactive peptide or protein and is useful for treating or preventing viral or bacterial diseases in humans. The present amino acid sequence represents an amylin peptide that is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pharmaceutical; weight loss; obesity; anorectic; nutritional disorder; hyperglycemia; antidiabetic; metabolic disorder; antilipemic; diabetes mellitus; metabolic disorder; glucose regulating peptide; amylin agonist; pramlintide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Treatment of a patient with anorexia or related condition comprises admin. of amylin or an analogue in an after. sufficient to increase the amylin level in the plasma of the patient. The pref. amylin analogues are given in AAR29197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt. and ratio sufficient to increase adipose tissue. Typical dosage units contain 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-MAR-
             New transmucosal glucose-regulating peptide (GRP) formulation, useful for treating e.g. obesity, hyperglycemia, dyslipidemia and diabetes mellitus and for inducing satiety in an individual and to promote weight-loss in
                                                                                                                                          comprising at least one glucose regularing peptide (GRP) such as amylin, an amylin analog (such as pramlintide), glucagon-like peptide-1 (GLP)-1, exendin-3 or exendin-4 and one or more mucosal delivery-enhancing agents. The formulation or the method is useful for treating variety of diseases and conditions in mammalian subjects including obesity, hyperglycemia, dyslipidemia and diabetes mellitus and for inducing satiety in an individual and to promote weight-loss in an individual. The invention is also useful in protein therapy. The present sequence is the human pramlintide peptide, which serves as an amylin agonist peptide.
                                                                                                                          present invention relates to pharmaceutical compositions and methods orising at least one glucose regulating peptide (GRP) such as amylin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of amylin and opt. insulin for treating anorexia - increases pla amylin and/or insulin levels, also for treating cachexia conditions, adipose tissue deficiency etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Arg(18)Leu(23)Pro(25)Val(26)Pro(28)-h-amylin for treating anorexia.
                                                                                                                                                                                                                                                                                                                                           Length 36;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                          New transmucosal glucose-regulating peptide (GRP) formulation, useful for treating e.g. obesity, hyperglycemia, dyslipidemia and diabetes mellitus and for inducing satiety in an individual and to promote weight-loss in
                                                                                                                                                                                                                                                         The present invention relates to pharmaceutical compositions and methods comprising at least one glucose regulating peptide (GRP) such as amylin, an amylin analog (such as pramlintide), glucagon-like peptide-1 (GLP)-1, exendin-3 or exendin-4 and one or more mucosal delivery-enhancing agents. The formulation or the method is useful for treating variety of diseases and conditions in mammalian subjects including obesity, hyperglycemia, dyslipidemia and diabetes mellitus and for inducing satiety in an individual and to promote weight-loss in an individual. The invention is also useful in protein therapy. The present sequence is the human pramilitide peptide, which serves as an amylin agonist peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pharmaceutical; weight loss; obesity; anorectic; nutritional disorder; hyperglycemia; antidiabetic; metabolic disorder; antilipemic; diabetes mellitus; metabolic disorder; glucose regulating peptide; amylin agonist; pramilintide;

The pref. amylin analogues are given in AAR29197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt. and ratio sufficient to increase adipose tissue. Typical dosage units contain 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-MAR-2003 to correct PN field.)

Treatment of a patient with anorexia or related condition comprises admin. Of amylin or an analogue in an amt. sufficient to increase the amylin level in the plasma of the patient. The pref. amylin analogues are given in AAR29197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt. and ratio sufficient to increase adipose tissue. Typical dosage units contain 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-MAR-2003 to correct PN field.)

amylin level in the plasma of the patient. The pref. amylin analogues are given in AAR29197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt. and ratio sufficient to increase adipose tissue. Typical dosage units contain 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This peptide is an example of amylin agonists of the invention which can be used as hyperglycaemics. The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779-R37795 and AAR18809-R38826.                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                   admin. of amylin or an analogue in an amt. sufficient to increase the amylin level in the plasma of the patient. The pref. amylin analogues are given in AR29197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt. and ratio sufficient to increase adipose tissue. Typical dosage units contain 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                       Use of amylin and opt. insulin for treating anorexia - increases plasma amylin and/or insulin levels, also for treating cachexia conditions, adipose tissue deficiency etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treating anorexia - increases plasma for treating cachexia conditions,

The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779-R37795 and AAR38809-R38826. The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779 -R37795 and AAR38809-R38826. This peptide is an example of amylin agonists of the invention which can be used as hyperglycaemics. The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779-R37795 and AAR3809-R38826.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This peptide is an example of amylin agonists of the invention which can be used as hyperglycaemics. The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779-R377795 and AAR38809-R38826.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                      This sequence represents a human amylin analogue, that acts as a amylin agonist. The invention relates to a liquid pharmaceutical formulation (A), that contains (wr./vol.): 0.01-0.5% amylin agonist (I); 1-10% carbohydrate or polyol (II); and has pH 3-6. (A) are used, in conjunction with sinciases in glucoae levels of the blood. In these formulations, (I) is stabilised, especially against deamidation and peptide bond hydrolysis for up to 4 years at 5 degrees C and 30 days at 30 degrees C, without addition of a separate stabiliser. They also retain short-term (up to 24 hr) stability when combined with insulin, allowing both agents to be administered together, reducing the number of injections required. Note:
                                                                                                                                                                                                                                                                                                               Stabilized liquid formulation for treatment of insulin-dependent diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Amylin agonist; human; insulin; diabetes; post-prandial glucose level;

This sequence represents a human amylin analogue, that acts as a amylin agonist. The invention relates to a liquid pharmaceutical formulation caponist. The invention relates to a liquid pharmaceutical formulation (A), that contains (wt./vol.): 0.01-0.5% amylin agonist (I); 1-10% carbohydrate or polyol (II); and 0.02-0.5% acetate, phosphate, citrate or glutamate buffer (III); and has pH 3-6. (A) are used, in conjunction with consulin, for treatment of diabetes, specifically to reduce post-prandial correspens in glucose levels of the blood. In these formulations, (I) is stabilised, especially against deamidation and peptide bond hydrolysis of for up to 4 years at 5 degrees C amd 30 days at 30 degrees C, without addition of a separate stabiliser. They also retain short-term (up to 24 administered together, reducing the number of injections required. Note: This sequence was created by the indexer from information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Stabilized liquid formulation for treatment of insulin-dependent diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amylin agonist; human; insulin; diabetes; post-prandial glucose level;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                   agonist. The invention relates to a liquid pharmaceutical formulation carbohydrate or polyol (II); and 0.02-0.5% amplin agonist (II); 1-10% carbohydrate or polyol (II); and 0.02-0.5% acctate, phosphate, citrate or glutamate buffer (III); and has pH 3-6. (A) are used, in conjunction with insulin, for treatment of diabetes, specifically to reduce post-prandial increases in glucose levels of the blood. In these formulations, (I) is stabilised, especially against deamdation and peptide bond hydrolysis for up to 4 years at 5 degrees C and 30 days at 30 degrees C, without hr) stability when combined with insulin, allowing both agents to be administered together, reducing the number of injections required. Note: This sequence was created by the indexer from information given in the
                                                                                                                                                                                                                            Stabilized liquid formulation for treatment of insulin-dependent diabetes
                                                                                                                                                                                                                                                                         sequence represents a human amylin analogue, that acts as a amylin ist. The invention relates to a liquid pharmaceutical formulation

and sequence represents a number of any line and source as a many and account the invention relates to a liquid pharmaceutical formulation (A), that contains (wt./vol.): 0.01-0.5$ amylin agonist (I); 1-10$ carbohydrate or polyol (II); and 0.02-0.5$ accetate, phosphate, citrate or glutamate buffer (III); and has pH 3-6. (A) are used, in conjunction with insulin, for treatment of diabetes, specifically to reduce post-prandial increases in glucose levels of the blood. In these formulations, (I) is stabilised, especially against deamidation and peptide bond hydrolysis for up to 4 years at 5 degrees C and 30 days at 30 degrees C, without addition of a separate stabiliser. They also retain short-term (up to 24 har) stability when combined with insulih, allowing both agents to be administered together, reducing the number of injections required. Note: This sequence was created by the indexer from information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Stabilized liquid formulation for treatment of insulin-dependent diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amylin; human; agonist; gastritis; gastric ulceration; treatment; non-steroidal anti-inflammatory agent; NSAID; intravenous; subcutaneous; pain; fever; inflammation; arthritis; hypercoagulation.

                                                                                                                                                                                                                                               This invention relates to a method for treating or preventing gastritis or gastric ulceration which comprises administering amylin or an amylin agonist. Amylin administration is not carried out intra-cerebroventricularly. The specification describes a method for treating or preventing a condition for which a non-steroidal anti-inflammatory agent (NSAID) is indicated, comprising administering amylin or amylin agonist, which is not calcitonin, together with NSAID and also a composition composition amylin or an amylin agonist or their salts, except calcitonin and a NSAID in a carrier. The amylin composition is by nasal, oral, pulmonary, transdermal and buccal routes. The method is also used to treat humans by administering it subcutaneously, intravenously or by nasal, oral, pulmonary, transdermal and buccal routes. The method is and other condition where an NSAID would be indicated. The present sequence is an example of an agonist used in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amylin; human; agonist; gastritis; gastric ulceration; treatment; non-steroidal anti-inflammatory agent; NSAID; intravenous; subcutaneous; pain; fever; inflammation; arthritis; hypercoagulation.
                                                                                                                                                                                    Method for treating or preventing gastritis - comprises administering amylin or amylin agonist, except calcitonin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human amylin agonist peptide 18-Arg23-Leu25-Pro26-Val28-Pro-amylin.

This invention relates to a method for treating or preventing gastritis or gastric ulceration which comprises administering amylin or an amylin agonist. Amylin administration is not carried out intraccerebroventricularly. The specification describes a method for treating or preventing a condition for which a non-steroidal anti-inflammatory agent (NSAID) is indicated, comprising administering amylin or amylin agonist, which is not calcitonin, together with NSAID and also a composition comprising an amylin or an amylin agonist or their salts, except calcitonin and a NSAID in a carrier. The amylin composition is by nasal, oral, pulmonary, transdermal and buccal routes. The method is also used to treat humans by administering it subcutaneously, intravenously or by nasal, oral, pulmonary, transdermal and buccal routes. The method is also used to treat pain, fever, inflammation, arthritis, hypercoagulation sequence is an example of an agonist used in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amylin; human; agonist; gastritis; gastric ulceration; treatment; non-steroidal anti-inflammatory agent; NSAID; intravenous; subcutaneous; pain; fever; inflammation; arthritis; hypercoagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Method for treating or preventing gastritis - comprises administering amylin or amylin agonist, except calcitonin.
                                                                                                                                                                                    Method for treating or preventing gastritis - comprises administering amylin or amylin agonist, except calcitonin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                         ð
                                This invention relates to a method for treating or preventing gastritis or gastric ulceration which comprises administering amylin or an amylin agonist. Amylin administration is not carried out intracerebroventricularly. The specification describes a method for treating or preventing a condition for which a non-steroidal anti-inflammatory agent (NSAID) is indicated, comprising administering amylin or amylin agonist, which is not calcitonin, together with NSAID and also a composition comprising an amylin or an amylin agonist or their salts, except calcitonin and a NSAID in a carrier. The amylin composition is used to treat humans by administering it subcutaneously, intravenously or by nasal, oral, pulmonary, transdermal and buccal routes. The method is also used to treat pain, fever, inflammation, arthritis, hypercoagulation and other condition where an NSAID would be indicated. The present sequence is an example of an agonist used in the method
                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amylin; human; agonist; gastritis; gastric ulceration; treatment; non-steroidal anti-inflammatory agent; NSAID; intravenous; subcutaneous; pain; fever; inflammation; arthritis; hypercoagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a method for treating or preventing gastritis or gastric ulceration which comprises administering amylin or an amylin agonist. Amylin administration is not carried out intra-cerebroventricularly. The specification describes a method for treating or preventing a condition for which a non-steroidal anti-inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Method for treating or preventing gastritis - comprises administering amylin or amylin agonist, except calcitonin.
                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                              ö

ö
agent (NSAID) is indicated, comprising administering amylin or amylin agonist, which is not calcitonin, together with NSAID and also a composition comprising an amylin or an amylin agonist or their salts, except calcitonin and a NSAID in a carrier. The amylin composition is used to treat humans by administering it subcutaneously, intravenously or by nasal, oral, pulmonary, transdermal and buccal routes. The method is also used to treat pain, fever, inflammation, arthritis, hypercoagulation and other condition where an NSAID would be indicated. The present sequence is an example of an agonist used in the method

The peptides are used to reduce gastric motility or for delaying gastric emptying in a mammal undergoing gastrointestinal diagnostic procedures, such as radiological examination or magnetic resonance imaging. They are also used for reducing gastrointestinal disorder, especially spasm, which is associated with a disorder of acute diverticulitis or disorders of biliary tract or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amylin agonist; amylin; gastric motility; gastric emptying; postprandial dumping syndrome; postprandial hyperglycemia; gastrointestinal diagnostic procedure; gastrointestinal disorder; spasm; acute diverticulitis; biliary tract disorder; sphincter of oddi disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treating gastrointestinal disorder e.g. spasm by reducing gastric motility or delaying gastric emptying, postprandial dumping syndrome or postprandial hyperglycemia, by administering amylin or amylin agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents an amylin agonist analogue compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

Amylin or amylin agonists are administered for reducing gastric motility or delaying gastric emptying, and for treating postprandial dumping syndrome or postprandial hyperslycemia, by inducing amylin activity, in a mammal. The peptides are used to reduce gastric motility or for delaying gastric emptying in a mammal undergoing gastrointestinal diagnostic procedures, such as radiological examination or magnetic resonance imaging. They are also used for reducing gastric motility in gastrointestinal disorder, especially spasm, which is associated with a disorder of acute diverticulities or disorders of biliary tract or sphincter of oddi. They are also used to treat postprandial dumping syndrome or postprandial hyperglycemia
                                                                                                                                                                                                                                                                             Amylin agonist; amylin; gastric motility; gastric emptying; postprandial dumping syndrome; postprandial hyperglycentia; gastrointestinal diagnostic procedure; gastrointestinal disorder; spasm; acute diverticulitis; biliary tract disorder; sphincter of oddi disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treating gastrointestinal disorder e.g. spasm by reducing gastric motility or delaying gastric emptying, postprandial dumping syndrome or postprandial hyperglycemia, by administering amylin or amylin agonist.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents an amylin agonist analogue compound. Amylin or amylin agonists are administered for reducing gastric motility or delaying gastric emptying, and for treating postprandial dumping syndrome or postprandial hyperglycemia, by inducing amylin activity, in mammal. The peptides are used to reduce gastric motility or for delaying gastric emptying in a mammal undergoing gastric motility or for delaying procedures, such as radiological examination or magnetic resonance imaging. They are also used for reducing gastric motility in disorder, especially spasm, which is associated with a disorder of acute diverticulities or disorders of biliary tract or sphincter of oddi. They are also used to treat postprandial dumping syndrome or postprandial hyperglycemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Amylin agonist, amylin, gastric motility, gastric emptying, postprandial dumping syndrome; postprandial hyperglycemia; gastrointestinal diagnostic procedure; gastrointestinal disorder; spasm; acute diverticulitis; biliary tract disorder; sphincter of oddi disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treating gastrointestinal disorder e.g. spasm by reducing gastric motility or delaying gastric emptying, postprandial dumping syndrome or postprandial hyperglycemia, by administering amylin or amylin agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Amylin or amylin agonists are administered for reducing gastric motility or delaying gastric emptying, and for treating postprandial dumping syndrome or postprandial hyperglycemia, by inducing amylin activity, in amammal. The peptides are used to reduce gastric motility or for delaying gastric emptying in a mammal undergoing gastrointestinal diagnostic imaging. They are also used for reducing gastric motility in gastrointestinal disorder, especially spasm, which is associated with a disorder of acute diverticulities or disorders by biliary tract or sphincter of oddi. They are also used to treat postprandial dumping syndrome or postprandial hyperglycemia. note: the present sequence does not appear in the specification; it was created using information
                                                                                                                                                                                           Amylin agonist; amylin; gastric motility; gastric emptying; postprandial dumping syndrome; postprandial hyperglycemia; gastrointestinal disgnostic procedure; gastrointestinal disorder; spasm; acute diverticulitis; biliary tract disorder; sphincter of oddi disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating gastrointestinal disorder e.g. spasm by reducing gastric motility or delaying gastric emptying, postprandial dumping syndrome opostprandial hyperglycemia, by administering amylin or amylin agonist.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents an amylin agonist analogue compound. Amylin or amylin agonists are administered for reducing gastric motility or delaying gastric emptying, and for treating postprandial dumping syndrome or postprandial hyperglycemia, by inducing amylin activity, in a mammal. The peptides are used to reduce gastric motility or for delaying gastric meptying in a mammal undergoing gastrointestinal diagnostic procedures, such as radiological examination or magnetic resonance imaging. They are also used for reducing gastric motility in gastrointestinal disorder, especially spaem, which is associated with a disorder of acute diverticulitis or disorders of biliary tract or sphincter of oddi. They are also used to treat postprandial dumping syndrome or postprandial hyperglycemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Amylin agonist; amylin; gastric motility; gastric emptying; postprandial dumping syndrome; postprandial hyperglycemia; gastrointestinal diagnostic procedure; gastrointestinal disorder; spasm; acute diverticulitis; biliary tract disorder; sphincter of oddi disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating gastrointestinal disorder e.g. spasm by reducing gastric motility or delaying gastric emptying, postprandial dumping syndrome or postprandial hyperglycemia, by administering amylin or amylin agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Human amylin agonist 18Arg25,28Pro-h-amylin.

(first entry)

19-APR-2002

ABB05490;

ABB05490 standard; peptide; 37 AA

RESULT 46 ABB05490

```
The present invention describes a liquid pharmaceutical formulation (A) comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or glutamate buffer (0.02 - 0.5) having a pH of 3 - 6. Also described is a commercial package containing the liquid pharmaceutical formulation (A). The package comprises a borosilicate glass vial having an open end, a stopper for multiuse compatible with the amylin and/or amylin agonist fixed in the open end of the vial. The package also comprises a cartridge for use in a pen injector. (A) has antidiabete; artivity and cartridge for use in a pen injector. (A) has antidiabete; The Commitation comprises amylin agonist which is biologically active, has a cartridge for use in a pen injector to precipitate in the presence of formulation comprises amylin agonist which is biologically active, has a reduced tendency to precipitate in the presence of compared to human amylin. The formulation maintains stability upon storage under refrigerated or room-temperature conditions. The compared to human amylin peptide analogue, which can be used as an or represents a human amylin peptide analogue, which can be used as an or amylin agonist in the present invention. With from the 37 amino acid human amylin as stated in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New pharmaceutical formulation useful for treating patients with type II diabetes comprises amylin agonist, carbohydrate or polyhydric alcohol and
                                                                                                                                                                                                                                                                                                                                                                                   Human, amylin agonist, amylin peptide analogue, acetate, carbohydrate, liquid pharmaceutical formulation, polyhydric alcohol, phosphate, citrate, glutamate, buffer, antidiabetic, type II diabetes.

The present invention describes a liquid pharmaceutical formulation (A) comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or glutamate buffer (0.02 - 0.5) having a pH of 3 - 6. Also described is a commercial package containing the liquid pharmaceutical formulation (A). The package comprises a borosilicate glass vial having an open end, a stopper for multiuse compatible with the amylin and/or amylin agonist cfixed in the open end of the vial. The package also comprises a corrulation comprises anylin agonist which is biologically activity and carbe used in the treatment of patients with type II diabetes. The formulation comprises amylin agonist which is biologically active, has a reduced tendency to form aggregates in water or at a presence of formulation comprises amylin. The formulation maintains stability upon storage under refrigerated or room-temperature conditions. The compared to human amylin, The formulation maintains stability upon storage under refrigerated or room-temperature conditions. The compared to human amylin postide analogue, which can be used as an or represents a human amylin peptide analogue, which can be used as an or amylin agonist in the present invention. Nab. The present sequence is not given in the present specification but is derived from the 37 amino acid human amylin as stated in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New pharmaceutical formulation useful for treating patients with type II diabetes comprises amylin agonist, carbohydrate or polyhydric alcohol and

comperising (wt/vols) an amylin agonist (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or comperising (wt/vols) an amylin agonist (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or compercial package containing the liquid pharmaceutical formulation (A). The package compraises a borosilicate glass vial having an open end, a stopper for multiuse compatible with the amylin and/or amylin agonist (fixed in the open end of the vial and an aluminium band to retain the compering and of the vial. The package also comprises a carridge for use in a pen injector. (A) has antidiabetic activity and cartridge for use in a pen injector. (A) has antidiabetic activity and cornulation comprises amylin agonist which is biologically active, has a reduced tendency to formist with type II diabetes. The formulation comprises amylin agonist which is biologically active, has a reduced tendency to precipitate in the presence of than 2 psi and has a reduced tendency to precipitate in the presence of storage under refigerated or room-temperature conditions. The storage under refingerated or room-temperature conditions. The compared to human amylin, the formulation maintains seability upon compared to refigerate the vial of insulin in use. The present sequence of contributes in improved stability of the hormone and the patients no longer centles in improved stability of the hormone and the patients no longer centles in the present invention. N. B. The present sequence is not amylin agonist in the present invention and the patient specification but is derived from the 37 amino acid human amylin as stated in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New pharmaceutical formulation useful for treating patients with type II diabetes comprises amylin agonist, carbohydrate or polyhydric alcohol and

                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic.
                                                                                                                                                      ABB05498;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             a buffer
                                                                  RESULT 47
```

```
The present invention describes a liquid pharmaceutical formulation (A) comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or glutamate buffer (0.02 - 0.5) having a pH of 3 - 6. Also described is a commercial package containing the liquid pharmaceutical formulation (A). The package comprises a borosilicate glass vial having an open end, a stopper for multiuse comparible with the amylin and/or amylin agonist fixed in the open end of the vial. The package also comprises a stopper in the far end of the vial. The package also comprises a catrity and can be used in the treatment of patients with type II diabetes. The commatrion comprises amylin agonist which is biologically active, has a reduced tendency to form aggregates in water or at a pressure of greater than 2 psi and has a reduced tendency to precipitate in the presence of the natural and has a reduced tendency to precipitate in the presence of storage under refrigerated or room-temperature conditions. The cormulation retains short-term mixing compatibility with insulin and results in improved stability of the hormone and the patients no longer represents a human amylin peptide analogue, which can be used as an creates and man amylin peptide analogue, which can be used as an or amylin agonist in the present invention. No. The present sequence is not given in the present specification but is derived from the 37 amino acid human amylin as stated in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New pharmaceutical formulation useful for treating patients with type II diabetes comprises amylin agonist, carbóhydrate or polyhydric alcohol and a buffer.
                                                                                                                                                                                                                                                                                     Human; amylin agonist; amylin peptide analogue; acetate; carbohydrate; liquid pharmaceutical formulation; polyhydric alcohol; phosphate; citrate; glutamate; buffer; antidiabetic; type II diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       84.9%; Score 118; DB 5; Length 37; 68.6%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, citrate or glutamate buffer (0.02 - 0.5) having a pH of 3 - 6. Also described is a commercial package containing the liquid pharmaceutical formulation (A). The package comprises a borosilicate glass vial having an open end, a stopper for multiuse compatible with the amylin and/or amylin agonist fixed in the open end of the vial. The package also comprises a compatible with the amylin about to retain the stopper in the far end of the vial. The package also comprises a cartivide for use in a pen injector. (A) has antidiabetic activity and can be used in the treatment of patients with type II diabetes. The formulation comprises anylin agonist which is biologically active, has a reduced tendency to form aggregates in water or at a pressure of greater than 2 psi and has a reduced tendency to precipitate in the presence of than 2 psi and has a reduced tendency to precipitate in the presence of storage under refrigerated or room-temperature conditions. The corporation contracts are pressure of storage under refrigerated or room-temperature conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New pharmaceutical formulation useful for treating patients with type II diabetes comprises amylin agonist, carbohydrate or polyhydric alcohol and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   represents a human amylin peptide analogue, which can be used as an amylin agonist in the present invention. N.B. The present sequence is not given in the present specification but is derived from the 37 amino acid human amylin as stated in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     longer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a liquid pharmaceutical formulation (A)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; amylin agonist; amylin peptide analogue; acetate; carbohydrate;
liquid pharmaceutical formulation; polyhydric alcohol; phosphate;
citrate; glutamate; buffer; antidiabetic; type II diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                formulation retains short-term mixing compatibility with insulin and results in improved stability of the hormone and the patients no long need to refrigerate the vial of insulin in use. The present invention describes a liquid pharmaceutical formulation (A) comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a comprising (wt/vol*) an amylin agonist (0.01 - 0.5), a carbohydrate or a polyhydric alcohol (1 - 10) and an acetate, phosphate, cirrate or glutamate buffer (0.02 - 0.5) having a pH of 3 - 6. Also described is a commercial package containing the liquid pharmaceutical formulation (A). The package comparises a borosilicate glass vial having an open end, a stopper for multiuse compatible with the amylin and/or amylin agonist (fixed in the open end of the vial. The package also comprises a correcting for use in a pen injector. (A) has antidiabetic activity and carbe used in the treatment of patients with type II diabetes. The corrulation comprises amylin agonist which is biologically active, has a commulation comprises amylin agonist which is biologically active, has a commerced tendency to form aggregates in water or at a pressure of greater than 2 psi and has a reduced tendency to precipitate in the presence of than 2 psi and has a reduced tendency to precipitate in the presence of storage under refrigerated or room-temperature conditions. The compared to human amylin, The formulation maintains stability upon storage under refrigerate the vial of insulin in use. The present sequence is not represents a human amylin peptide analogue, which can be used as an or amylin agonist in the present invention. Whe present sequence is not given in the present specification but is derived from the 37 amino acid human amylin as stated in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New pharmaceutical formulation useful for treating patients with type II diabetes comprises amylin agonist, carbohydrate or polyhydric alcohol and
                                                                                                                                                                                                                                                             Human; amylin agonist; amylin peptide analogue; acetate; carbohydrate;
